

**VERBRUGGE  
INTERNATIONAL B.V.**

**Verbrugge Terminals**

**Wood logs handling services**

**Breakbulk & Containers**

## Introduction

Verbrugge International is a family-owned company, operating three deep-sea terminals in Vlissingen and Terneuzen in the South West of the Netherlands. We offer the full package of logistics services to our customers in a one-stop-shop concept. The entire logistic operation can be outsourced to Verbrugge i.e.: stevedoring, transshipment, storage, warehousing, container forwarding, transport and distribution per vessel, barge, rail or truck and port agency services. Furthermore, we offer value added services like fumigation, packing, customs services, and fiscal representation.

## Fumigation services for containers

At our terminals in Vlissingen, we offer efficient, sustainable, flexible and high-quality fumigation services, at very competitive rates. We take care of fast and efficient logistics, whereas our selected fumigation partners are providing fumigation services in compliance with all applicable regulations.

At our Verbrugge Zeeland Terminal in Vlissingen we are operating a large fumigation yard, where we offer a capacity of at least 1,000 CONTAINERS per week.

## Container stuffing

We also provide stuffing services. Wood logs arrive in BREAKBULK, by barge, rail or truck. We stuff them into container and position the containers at the fumigation area for further treatment.

Vlissingen is located between Antwerp and Rotterdam. We provide fast and reliable deliveries per barge, to all container terminals in Antwerp and Rotterdam. To provide a full range of services, we also offer container barging from several terminals in Germany, to our fumigation zone in Vlissingen.

## Verbrugge Zeeland Terminals

- Big capacity for containers
- Located between Rotterdam and Antwerp
- Stuffing of wood logs in containers possible
- Own barging service for pick-up and delivery
- Tri-modal (water / rail / road)
- ONE-STOP-SHOP

### Fumigation of wood logs in breakbulk

We also provide handling and storage for wood logs in breakbulk. Shipments of wood logs up to 50,000 CBM can be handled and fumigated in a safe and efficient way. We can receive the wood logs either by barge, rail or truck. We store them at our terminal and load them on board of a deep-sea vessel. Our terminal is located close to the open sea, freely accessible for vessels up to 14.5 meters draft.

Fumigation is done on board of the incoming barges, at the quayside or on board of deep-sea vessel. A detailed operational plan is made, to minimize the laytime of the vessel and ensure fumigation and inspection within the shortest possible timeframe.

### Verbrugge Scaldia Terminals

- Wood logs in breakbulk
- Located between Antwerp and Rotterdam
- Shipments up to 50,000 CBM
- Tri-modal (water / rail / road)
- ONE-STOP-SHOP
